Contents

Preface 1
P. Hartley, J. Lin, M. Jolly, M. Pietrzyk, J. Majta

Keynote Papers

Metal forming techniques for lightweight construction 2
M. Kleiner, S. Chatti, A. Klaus

Micro-forming and miniature manufacturing systems — development needs and perspectives 8
Y. Qin

Virtual metal forming including the ductile damage occurrence. Actual state of the art and main perspectives 19
K. Saanouni

Prediction of structure during shaped extrusion and subsequent static recrystallisation during the solution soaking operation 26
T. Sheppard

Oxide scale behaviour on aluminium and steel under hot working conditions 36
M.F. Frolish, M. Krzyzanowski, W.M. Rainforth, J.H. Beynon

Novel applications of smoothed particle hydrodynamics (SPH) in metal forming 41
P.W. Cleary, M. Prakash, J. Ha

Numerical Methods

Numerical solution of bulk metal forming processes by the reproducing kernel particle method 49
S. Xiong, P.A.F. Martins

The extended finite element method (X-FEM) for powder forming problems 53
A.R. Khoei, A. Shamloo, M. Anahid, K. Shahim

Contact friction modeling with the extended finite element method (X-FEM) 58
A.R. Khoei, M. Nikbakht

Parallel processing of 3D rigid-plastic finite element method using diagonal matrix 63
K. Mori, Y. Otomo, H. Yoshimura

Application of the fully automatic 3D *hp* adaptive code to orthotropic heat transfer in structurally graded material properties 68
M. Paszyński, P. Macioł

An integrated numerical technique in determining blank shape for netshape sheet metal forming 72
F. Lan, J. Lin, J. Chen

Sheet Stamping

Embedding of a circular plate into a thin plate by shear joining and its joint strength 76
Y. Kasuga

Minimizing wastage of sheet metal for economical manufacturing 81
R.L. Kamalapurkar, P.P. Date

Minimization of the thickness variation in multi-step sheet metal stamping 84
Y. Huang, Z.Y. Lo, R. Du

The publisher encourages the submission of articles in electronic form thus saving time and avoiding rekeying errors. A leaflet describing our requirements is available from the publisher upon request.

Elsevier B.V.

Increasing formability in sheet metal stamping operations using environmentally friendly lubricants 87
M. Lovell, C.F. Higgs, P. Deshmukh, A. Mobley

Superplasticity

Optimisation of the superplastic forming of aluminium alloys 91
P.S. Bate, N. Ridley, B. Zhang, S. Dover

Modelling the free forming of superplastic Pb–Sn60 at constant pressure 95
G. Giuliano, L. Carrino, S. Franchitti

Special Session on Modelling

Development of an integrated CAD/CAE/CAM system on taper-tipped thread-rolling die-plates 98
Y.-C. Kao, H.-Y. Cheng, C.-H. She

Use of Taguchi method to develop a robust design for the shape rolling of porous sectioned sheet 104
D.-C. Chen, C.-F. Chen

A simplified column model for the automatic design of the stamping die structure 109
J.-J. Sheu, C.-H. Yang

Analysis of asymmetrical cold and hot bond rolling of unbounded clad sheet under constant shear friction 114
S.C. Pan, M.N. Huang, G.-Y. Tzou, S.W. Syu

Prediction of coiling temperature on run-out table of hot strip mill using data mining 121
H.B. Xie, Z.Y. Jiang, X.H. Liu, G.D. Wang, A.K. Tieu

Modelling of oxide scale surface roughness in hot metal forming 126
J. Tang, A.K. Tieu, Z.Y. Jiang

An approach to analyse the special rolling of thin strip 130
Z.Y. Jiang, H.T. Zhu, D.B. Wei, A.K. Tieu

Modeling of aluminum alloy sheets based on new anisotropic yield functions 134
J.W. Yoon, S.H. Hong

A study on the computer-aided measuring integration system for the sheet metal stamping die 138
C.-H. She, C.-C. Chang, Y.-C. Kao, H.-Y. Cheng

Finite element analysis and formability of non-isothermal deep drawing of AZ31B sheets 142
T.-B. Huang, Y.-A. Tsai, F.-K. Chen

A study of size effect in micro-forming with micro-hardness tests 146
F.-K. Chen, J.-W. Tsai

Investigation of a slab method analysis and FEM simulation on rotating compression forming of ring 150
G.-Y. Tzou, H.-H. Hsu, Y.-H. Hsiao

Study on the bulging deformation of the porous metal in upsetting 154
T.-S. Yang, Y.-C. Hsu

An upper bound solution for a solid viscous cylinder subject to compression and twist 159
G.-Y. Tzou, S. Alexandrov

A method to produce aluminum alloy tube busbars by continuous casting-expansion extrusion 163
T.-G. Zhou, Z.Y. Jiang, J.L. Wen, A.K. Tieu

Tube Forming

Three dimensional thermo-mechanical simulation of the tube forming process in Diescher's mill 167
Z. Pater, J. Kazanecki, J. Bartnicki

Free deformation mechanism and change of forming mode in tube inversion under conical die 171
Z.C. Sun, H. Yang

Energetic analysis of tube drawing processes with fixed plug by upper bound method 175
E.M. Rubio, C. González, M. Marcos, M.A. Sebastián

Analysis of deformation behaviour of the large diameter pipe by U-O bending process 179
H. Moslemi Naeini, G.H. Liaghat, R. Mahshid, A. Sajedinejad, K. Vahedi, B. Ahmadimehr

End forming of thin-walled tubes 183
M.L. Alves, B.P.P. Almeida, P.A.R. Rosa, P.A.F. Martins

Accelerated 3D FEM computation of the mechanical history of the metal deformation in cold pilgering of tubes 188
B. Lodej, K. Niang, P. Montmitonnet, J.-L. Aubin

Tube Bending

A new method to accurately obtain wrinkling limit diagram in NC bending process of thin-walled tube with large diameter under different loading paths 192
H. Li, H. Yang, M. Zhan, R.J. Gu

Springback analysis of numerical control bending of thin-walled tube using numerical-analytic method 197
M. Zhan, H. Yang, L. Huang, R. Gu

Forging Processes

Quantitative analysis of the impact of forging operations on fatigue properties of steel components 202
Y. Chastel, N. Caillet, P.-O. Bouchard

Improvement of tool life in cold forging by locally optimized surfaces 206
K. Wagner, A. Putz, U. Engel

Forgeability of Mg–Al–Zn magnesium alloys in hot and warm closed die forging 210
P. Skubisz, J. Sińczak, S. Bednarek

The research of forging process of eccentric part on three slide forging press 214
W.S. Weroński, A. Gontarz, Z. Pater

Prevention of lap formation in near net shape isothermal forging technology of part of irregular shape made of aluminium alloy A92618 ... 218
P. Petrov, V. Perfilov, S. Stebunov

Towards an optimisation of forging processes using geometric parameters 224
I. Khoury, L. Giraud-Moreau, P. Lafon, C. Labergére

Forming process of valve drop forging with three cavities 228
A. Gontarz

A study on crack healing in 1045 steel 233
D. Wei, J. Han, Z.Y. Jiang, C. Lu, A.K. Tieu

Theoretical and laboratory modelling of the closure of metallurgical defects during forming of a forging 238
G. Banaszek, A. Stefanik

Evaluation of contact conditions in hot forging of pure aluminum using ultrasonic examination 243
H. Saiki, Z.H. Zhan, Y. Marumo, L. Ruan, T. Morooka, S.I. Tatsuda

A new experimental procedure of evaluating the friction coefficient in elastic and plastic regions 247
M. Tajdari, M. Javadi

Effects of simulation conditions on evaluation of tool temperature in hot extrusion-forging 251
A. Minami, Y. Marumo, H. Saiki, L. Ruan, O. Shizuma

Relations between numerical simulation and experiment in closed die forging of a gear 256
M. Skunca, P. Skakun, Z. Keran, L. Sidjanin, M.D. Math

The effects of flash allowance and bar size on forming load and metal flow in closed die forging 261
F. Fereshteh-Saniee, A.H. Hosseini

Electro-Magnetic Forming

Characterisation of extruded magnesium profiles for electromagnetic joining 266
V. Psyk, C. Beerwald, A. Klaus, M. Kleiner

Multifield modeling of electromagnetic metal forming processes 270
J. Unger, M. Stiemer, B. Svendsen, H. Blum

Forming of axisymmetric tubes under the influence of impulse-magnetic field and computer simulation of the process 274
V.Y. Astapov, E.V. Usachev, L.L. Khoroshko, M. Tajdari, A.M. Amouei, S.E. Hosseini Mehraban

Damage Modelling

Finite element prediction of ductile fracture in sheet metal forming processes 278
P. Teixeira, A.D. Santos, F.M. Andrade Pires, J.M.A. César de Sá

On the modelling of the interaction of materials softening and ductile damage during hot working of Alloy 80A 282
C. Sommitsch, P. Pölt, G. Rüf, S. Mitsche

Analysis of blanking process using various damage criteria 287
M. Farzin, H.R. Javani, M. Mashayekhi, R. Hambli

Identification and validation of a ductile damage model for A533 steel 291
M. Mashayekhi, S. Ziaei-Rad

Sensitivity analysis of quantitative fracture criterion based on the results of the SICO test 296
L. Trebacz, D. Szeliga, M. Pietrzyk

Numerical and experimental assessment of ductile fracture in tensile and compressive-dominant processes 300
M. Vaz Jr., N. de Santi Jr., G.O. Verran, E.A. de Souza Neto

Influence of geometrical conditions on central burst appearance in axisymmetrical drawing processes 304
A.M. Camacho, C. González, E.M. Rubio, M.A. Sebastián

Applications of Artificial Intelligence Techniques

Inverse identification using the bulge test and artificial neural networks 307
A. Chamekh, H. BelHadjSalah, R. Hambli, A. Gahbiche

Parameter optimisation in constitutive equations for hot forging 311
M. Mulyadi, M.A. Rist, L. Edwards, J.W. Brooks

On the use of artificial intelligence tools for fracture forecast in cold forming operations 315
R. Di Lorenzo, G. Ingarao, F. Micari

Using an artificial neural network to assist roll design in cold roll-forming processes 319
A. Downes, P. Hartley

Modelling of the rheological behaviour of aluminium alloys in multistep hot deformation using the multiple regression analysis and artificial neural network techniques 323
C. Bruni, A. Forcellese, F. Gabrielli, M. Simoncini

Distributed multi-agent system approach for sheet metal forming 327
D. Karayel, S.S. Ozkan

A knowledge-based engineering design tool for metal forging 331
J. Kulon, D.J. Mynors, P. Broomhead

Friction Stir-Welding

Utilisation of engineering workshop equipment for friction stir welding 336
T. Minton, D.J. Mynors

On microstructural phenomena occurring in friction stir welding of aluminium alloys 340
A. Barcellona, G. Buffa, L. Fratini, D. Palmeri

Solid state bonding in extrusion and FSW: Process mechanics and analogies 344
G. Buffa, L. Donati, L. Fratini, L. Tomesani

Sintering

Homogeneity aspects in selective laser sintering (SLS) 348
S. Kolosov, G. Vansteenkiste, N. Boudeau, J.C. Gelin, E. Boillat

Experiments and numerical modelling of solid state sintering for 316L stainless steel components 352
J. Song, J.C. Gelin, T. Barrière, B. Liu

Shot Peening

Joining and shaping fit of dissimilar materials by shot peening 356
Y. Harada, N. Tsuchida, K. Fukaura

Sheet Forming

Numerical research and optimisation of high pressure sheet metal forming of tailor rolled blanks 360
M. Urban, M. Krahn, G. Hirt, R. Kopp

Forming of aluminum foam sandwich panels: Numerical simulations and experimental tests 364
D. Contorno, L. Filice, L. Fratini, F. Micari

Experimental and numerical investigation of restoration behavior of sheet metals subjected to bulging deformation 368
C.S. Namoco Jr., T. Iizuka, R.C. Sagrado, N. Takakura, K. Yamaguchi

Air bending of AZ31 magnesium alloy in warm and hot forming conditions 373
C. Bruni, A. Forcellese, F. Gabrielli, M. Simoncini

Close loop control of a hydraulic press for springback analysis 377
J.A. Ferreira, P. Sun, J.J. Grácio

A method of constructing smooth tool surfaces for FE prediction of springback in sheet metal forming 382
F. Lan, J. Chen, J. Lin

Effect of annealing temperature on the formability of Al–Mg4.5–Cu0.5 alloy sheets 386
E. Romhanji, M. Popovic, D. Glisic, R. Dodok, D. Jovanovic

Formability of Nb bearing ultra high-strength TRIP-aided sheet steels 390
K.-I. Sugimoto, T. Muramatsu, S.-I. Hashimoto, Y. Mukai

Investigation of 22MnB5 formability in hot stamping operations 396
A. Turetta, S. Bruschi, A. Ghiotti

Numerical investigation on dynamic effects during sheet metal spinning by explicit finite-element-analysis 401
G. Sebastiani, A. Brosius, R. Ewers, M. Kleiner, C. Klimmek

Theoretical and experimental analysis of the dieless incremental sheet forming process 404
I. Cerro, E. Maidagan, J. Arana, A. Rivero, P.P. Rodríguez

Optimization of tool path in two points incremental forming 409
A. Attanasio, E. Ceretti, C. Giardini

A force measuring based strategy for failure prevention in incremental forming 413
G. Ambrogio, L. Filice, F. Micari

Sheet Joining

Joinability of aluminium alloy and mild steel sheets by self piercing rivet 417
Y. Abe, T. Kato, K. Mori

Sheet Drawing

Using forming simulations to improve mechanical simulation accuracy 422
P. Myllykoski

New framework for on-line feedback control of a deep-drawing operation 426
B. Endelt, K.B. Nielsen, J. Danckert

Modeling and simulation of directional hardening in metals during non-proportional loading 430
J. Wang, V. Levkovitch, B. Svendsen

TRIP steel: Plastic behaviour modelling and influence on functional behaviour 433
S. Thibaud, N. Boudeau, J.C. Gelin

On the quantification of strain distribution in drawn sheet metal products 439
S.G. Desai, P.P. Date

Material Characterisation

Thermo-mechanical treatment using resistance heating for production of fine grained heat-treatable aluminum alloy sheets 444
S. Maki, M. Ishiguro, K.-I. Mori, H. Makino

Influence of sequence and simultaneous deformation on behavior of CuSi3.5 silicon bronze 448
Z. Gronostajski, K. Jaśkiewicz

Investigation of the thermo-mechanical properties of hot stamping steels 452
M. Merklein, J. Lechler

A physical based modeling approach for the dynamic behavior of ultrafine grained structures 456
K. Muszka, P.D. Hodgson, J. Majta

The possibilities of mechanical property control in fine grained structures 461
T. Sleboda, K. Muszka, J. Majta, P. Hale, R.N. Wright

Variations of effective length of the hot torsion test specimen with deformation 465
S. Khoddam

High temperature deformation of Inconel 718 469
A. Thomas, M. El-Wahabi, J.M. Cabrera, J.M. Prado

Quantitative analysis of the microstructure of near β titanium alloy during compression tests 473
F. Warchomicka, M. Stockinger, H.P. Degischer

An investigation on determination of flow curves at room temperature and under forming conditions 478
F. Fereshteh-Saniee, F. Fatehi-Sichani

Forming behavior of magnesium sheet 483
R.H. Wagoner, X.Y. Lou, M. Li, S.R. Agnew

Rolling Processes

Prediction and avoidance of high temperature damage in long product hot rolling 486
D.C.J. Farrugia

The application of the inverse method for determination of slitting criterion parameter during the multi slit rolling (MSR) process 493
S. Mróz, A. Stefanik, H. Dyja

Experimental investigation of the spatial variation in viscoplastic response of free-machining steels in hot rolling conditions 497
A.D. Foster, J. Lin, D.C.J. Farrugia, T.A. Dean

Experimental investigation of roughening of the matt surface in pack rolling 501
H. Utsunomiya, M.P.F. Sutcliffe, H.R. Shercliff, D.B. Miller

Cold rolling of galvanized strips: A new approach to the evaluation of zinc fines formation 505
M. Dubar, S. Huart, R. Deltombe, A. Dubois, L. Dubar

Modelling of skinpass rolling by elasto-plastic analysis of plane strain upsetting 509
H. Kijima, N. Bay

Advanced finite element modelling of plate rolling operations 513
M. Trull, D. McDonald, A. Richardson, D.C.J. Farrugia

Power optimization of common breaking-down sequences in shape rolling 517
M. Sombolestan, M. Salimi

Application of hydrostatic integration parameter for free-forging and rolling 521
M. Nakasaki, I. Takasu, H. Utsunomiya

Elasto-plastic finite element simulation of asymmetrical plate rolling using an ALE approach 525
F. Farhat-Nia, M. Salimi, M.R. Movahhedy

Prediction of microstructural evolution in hot rolling 530
F. Wang, Q. Zhu, J. Lin, T.A. Dean

Twin-roll strip casting of AZ61 magnesium alloy and improvement of formability by structure-control rolling 534
T. Mino, M. Asakawa, D. Lee, T. Fujiwara, K. Matsuzaki, M. Kobayashi

Development of a critical friction model for cross wedge rolling hollow shafts 539
S. Urankar, M. Lovell, C. Morrow, Q. Li, K. Kawada

Establishment of failure conditions for the cross-wedge rolling of hollow shafts 545
S. Urankar, M. Lovell, C. Morrow, Q. Li, K. Kawada

Cross-wedge rolling by means of one flat wedge and two shaped rolls 550
Z. Pater, A. Gontarz, W. Weroński

Texture evolution and variations of α-phase volume fraction in cold-rolled AISI 301 steel strip 555
J. Łuksza, M. Rumiński, W. Ratuszek, M. Blicharski

Numerical modelling of the metal flow and stock bending during the rolling of unequal angle bar 561
S. Mróz, A. Milenin

Numerical modelling of the metal flow during the rolling process of the round screw-ribbed bar in the finishing pass 566
P. Szota, H. Dyja

Manufacture of magnetic scaling rod with transformation-induced plasticity 570
N. Hoya, M. Asakawa, H. Ueda, T. Hamada, T. Okada

Development of a mixed film lubrication model in cold rolling 575
M. Saniei, M. Salimi

Extrusion Processes

Analysis of quality of bimetallic rod after extrusion process 582
S. Berski, H. Dyja, A. Maranda, J. Nowaczewski, G. Banaszek

Simulation of welding chamber conditions for composite profile extrusion 587
M. Kleiner, M. Schikorra

Quantitative evaluation of dimensional errors of formed components in cold backward cup extrusion 591
H. Long

Experimental and numerical study of optimum die profile in backward rod extrusion 596
M. Bakhshi-Jooybari, M. Saboori, S.J. Hosseinipour, M. Shakeri, A. Gorji

Analysis of flash formation in continuous rotary extrusion of copper 600
T. Manninen, T. Katajarinne, P. Ramsay

Numerical simulation of flash formation in continuous rotary extrusion of copper 604
T. Katajarinne, T. Manninen, P. Ramsay

Upper bound analysis of die land length in cold extrusion 608
J.S. Ajiboye, M.B. Adeyemi

Experimental and numerical study of energy consumption in forward and backward rod extrusion 612
M. Saboori, M. Bakhshi-Jooybari, M. Noorani-Azad, A. Gorji

Cold Roll Forming

Localized edge buckling in cold roll-forming of circular tube section 617
M. Salmani Tehrani, H. Moslemi Naeini, P. Hartley, H. Khademizadeh

Application of the Arbitrary Lagrangian Eulerian formulation to the numerical simulation of cold roll forming process 621
R. Boman, L. Papeleux, Q.V. Bui, J.P. Ponthot

Eco-efficiency of the cold roll formed product supply chain 626
M. English, M. Castellucci, D.J. Mynors

Ring Rolling

The design of a flexible model ring rolling machine 630
T.F. Stanistreet, J.M. Allwood, A.M. Willoughby

Research on the influence of material properties on cold ring rolling processes by 3D-FE numerical simulation 634
H. Yang, L. Guo, M. Zhan, Z. Sun

Micro-Scale Metal Forming

Fabrication of dies in micro-scale for micro-sheet metal forming 639
K. Fujimoto, M. Yang, M. Hotta, H. Koyama, S. Nakano, K. Morikawa, J. Cairney

Investigation on the sliding of aluminium thin foils against PVD-coated carbide forming-tools during micro-forming 644
G.G. Fuentes, M.J. Díaz de Cerio, R. Rodriguez, J.C. Avelar-Batista, E. Spain, J. Housden, Y. Qin

Study on piercing mechanism of small holes 649
M. Sasada, H. Kobayashi, I. Aoki

Hydroforming

Investigation on determination of loading path to enhance formability in tube hydroforming process using APDL 653
S.C. Heo, J. Kim, B.S. Kang

Investigation on preformed shape design to improve formability in tube hydroforming process using FEM 658
W.J. Song, S.C. Heo, J. Kim, B.S. Kang

An approach to process limitations in hydroforming of X-joints as based on formability evaluation 663
A. Kocanda, H. Sadlowska

Effect of wrinkling behavior on formability and thickness distribution in tube hydroforming 668
S. Yuan, W. Yuan, X. Wang

Tube-hydroforming experiments on an Al 7003 extruded tube 672
E. Ceretti, C. Contri, C. Giardini

Formability of tube hydroforming under various loading paths 676
T. Hama, T. Ohkubo, K. Kurisu, H. Fujimoto, H. Takuda

An experimental investigation into the formability of hydroforming 5A02 Al-tubes at elevated temperature 680
S. Yuan, J. Qi, Z. He

Finite element simulation and experiment in tube hydroforming of unequal T shapes 684
H. Kashani Zadeh, M.M. Mashhadi

Analysis of thinning at the transition corner in tube hydroforming 688
G. Liu, S. Yuan, B. Teng

Optimized decision of the exact material modes in the simulation for the innovative sheet hydroforming method 692
L. Lang, T. Li, X. Zhou, B.E. Kristensen, J. Danckert, K.B. Nielsen

Modelling and process control for the hydroforming of metallic liners used for hydrogen storage 697
J.C. Gelin, C. Labergére, S. Thibaud

Wire Drawing

Experimental analysis of drawn composite wire 701
P.J. McAllen, P. Phelan

Effect of "additional shear strain layer" on tensile strength and microstructure of fine drawn wire 704
S. Kajino, M. Asakawa

Deformation analysis of Au wire bonding 709
H. Saiki, Y. Marumo, H. Nishitake, T. Uemura, T. Yotsumoto

Subject Index of Volume 177

ABAQUS
Research on the influence of material properties on cold ring rolling processes by 3D-FE numerical simulation, 634
Accumulated fluence
Homogeneity aspects in selective laser sintering (SLS), 348
Adaptive method
Investigation on determination of loading path to enhance formability in tube hydroforming process using APDL, 653
Additional shear strain layer
Effect of "additional shear strain layer" on tensile strength and microstructure of fine drawn wire, 704
Adhesive joint
Embedding of a circular plate into a thin plate by shear joining and its joint strength, 76
AFS
Forming of aluminum foam sandwich panels: Numerical simulations and experimental tests, 364
Al deposited film
Deformation analysis of Au wire bonding, 709
ALE formulation
Application of the Arbitrary Lagrangian Eulerian formulation to the numerical simulation of cold roll forming process, 621
Al–Mg–Cu sheet
Effect of annealing temperature on the formability of Al–Mg4.5–Cu0.5 alloy sheets, 386
Alpha phase morphology
Quantitative analysis of the microstructure of near β titanium alloy during compression tests, 473
Aluminium alloy sheet
Joinability of aluminium alloy and mild steel sheets by self piercing rivet, 417
Thermo-mechanical treatment using resistance heating for production of fine grained heat-treatable aluminum alloy sheets, 444
Aluminium alloys
A method to produce aluminum alloy tube busbars by continuous casting-expansion extrusion, 163
Prevention of lap formation in near net shape isothermal forging technology of part of irregular shape made of aluminium alloy A92618, 218
Experimental investigation of roughening of the matt surface in pack rolling, 501
Optimized decision of the exact material modes in the simulation for the innovative sheet hydroforming method, 692
Aluminium transfer
Investigation on the sliding of aluminium thin foils against PVD-coated carbide forming-tools during micro-forming, 644
Aluminum
A new experimental procedure of evaluating the friction coefficient in elastic and plastic regions, 247
Utilisation of engineering workshop equipment for friction stir welding, 336
6061 aluminum alloy
Thermo-mechanical treatment using resistance heating for production of fine grained heat-treatable aluminum alloy sheets, 444
Aluminum stamping
Close loop control of a hydraulic press for springback analysis, 377
Aluminum tube
An experimental investigation into the formability of hydroforming 5A02 Al-tubes at elevated temperature, 680
Analytical model
Analysis of flash formation in continuous rotary extrusion of copper, 600
Anisotropy
Quantitative analysis of the impact of forging operations on fatigue properties of steel components, 202
Finite element prediction of ductile fracture in sheet metal forming processes, 278
Modeling and simulation of directional hardening in metals during non-proportional loading, 430
APDL
Investigation on determination of loading path to enhance formability in tube hydroforming process using APDL, 653
Artificial intelligence
On the use of artificial intelligence tools for fracture forecast in cold forming operations, 315
Artificial neural networks
Inverse identification using the bulge test and artificial neural networks, 307
On the use of artificial intelligence tools for fracture forecast in cold forming operations, 315
Using an artificial neural network to assist roll design in cold roll-forming processes, 319
Modelling of the rheological behaviour of aluminium alloys in multistep hot deformation using the multiple regression analysis and artificial neural network techniques, 323
Assembly
TRIP steel: Plastic behaviour modelling and influence on functional behaviour, 433
Assignment to CPUs
Parallel processing of 3D rigid-plastic finite element method using diagonal matrix, 63
Asymmetrical rolling
Elasto-plastic finite element simulation of asymmetrical plate rolling using an ALE approach, 525
At elevated temperature
An experimental investigation into the formability of hydroforming 5A02 Al-tubes at elevated temperature, 680
Austenite
Texture evolution and variations of α-phase volume fraction in cold-rolled AISI 301 steel strip, 555
Manufacture of magnetic scaling rod with transformation-induced plasticity, 570

Elsevier B.V.
doi:10.1016/S0924-0136(06)00581-4

AZ31
Forgeability of Mg–Al–Zn magnesium alloys in hot and warm closed die forging, 210
AZ61
Forgeability of Mg–Al–Zn magnesium alloys in hot and warm closed die forging, 210
Twin-roll strip casting of AZ61 magnesium alloy and improvement of formability by structure-control rolling, 534

22mnB5
Investigation of the thermo-mechanical properties of hot stamping steels, 452
Backward cup extrusion
Quantitative evaluation of dimensional errors of formed components in cold backward cup extrusion, 591
Backward extrusion
Experimental and numerical study of optimum die profile in backward rod extrusion, 596
Experimental and numerical study of energy consumption in forward and backward rod extrusion, 612
Banitic ferrite
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Bar size
The effects of flash allowance and bar size on forming load and metal flow in closed die forging, 261
Bending
Air bending of AZ31 magnesium alloy in warm and hot forming conditions, 373
Bimetal
Analysis of quality of bimetallic rod after extrusion process, 582
Blank design
An integrated numerical technique in determining blank shape for netshape sheet metal forming, 72
Blanking
Analysis of blanking process using various damage criteria, 287
Bloom position
Experimental investigation of the spatial variation in viscoplastic response of free-machining steels in hot rolling conditions, 497
Bond rolling
Analysis of asymmetrical cold and hot bond rolling of unbounded clad sheet under constant shear friction, 114
Bondability
Deformation analysis of Au wire bonding, 709
Bonding conditions
Deformation analysis of Au wire bonding, 709
Bonding point
Analysis of asymmetrical cold and hot bond rolling of unbounded clad sheet under constant shear friction, 114
Boundary lubrication
Development of a mixed film lubrication model in cold rolling, 575
Buckling
Experimental and numerical investigation of restoration behavior of sheet metals subjected to bulging deformation, 368
Bulge test
Inverse identification using the bulge test and artificial neural networks, 307
Bulging
Experimental and numerical investigation of restoration behavior of sheet metals subjected to bulging deformation, 368
Bulging deformation
Study on the bulging deformation of the porous metal in upsetting, 154
Bulk forming
On the use of artificial intelligence tools for fracture forecast in cold forming operations, 315
Bursting failure
Investigation on determination of loading path to enhance formability in tube hydroforming process using APDL, 653
CAD/CAE/CAM integration
Development of an integrated CAD/CAE/CAM system on taper-tipped thread-rolling die-plates, 98
CAD-CAM design
Optimization of tool path in two points incremental forming, 409
CAE
A simplified column model for the automatic design of the stamping die structure, 109
Cap plasticity
The extended finite element method (X-FEM) for powder forming problems, 53
Center porosity
Application of hydrostatic integration parameter for free-forging and rolling, 521
Central burst
Influence of geometrical conditions on central burst appearance in axisymmetrical drawing processes, 304
Circular tube section
Localized edge buckling in cold roll-forming of circular tube section, 617
Closed die forging
The effects of flash allowance and bar size on forming load and metal flow in closed die forging, 261
Closed loop control systems
New framework for on-line feedback control of a deep-drawing operation, 426
Closed-die forging workability
Forgeability of Mg–Al–Zn magnesium alloys in hot and warm closed die forging, 210
CNC machine
Theoretical and experimental analysis of the dieless incremental sheet forming process, 404
Cockroft–Latham criterion
The application of the inverse method for determination of slitting criterion parameter during the multi slit rolling (MSR) process, 493
Coefficient
A new experimental procedure of evaluating the friction coefficient in elastic and plastic regions, 247
Coiling temperature
Prediction of coiling temperature on run-out table of hot strip mill using data mining, 121
Cold forging
Improvement of tool life in cold forging by locally optimized surfaces, 206
Cold formability
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Cold ring rolling
Research on the influence of material properties on cold ring rolling processes by 3D-FE numerical simulation, 634
Cold roll-forming
Analysis of deformation behaviour of the large diameter pipe by U-O bending process, 179
Using an artificial neural network to assist roll design in cold roll-forming processes, 319
Localized edge buckling in cold roll-forming of circular tube section, 617
Application of the Arbitrary Lagrangian Eulerian formulation to the numerical simulation of cold roll forming process, 621
Eco-efficiency of the cold roll formed product supply chain, 626
Cold rolling
Texture evolution and variations of α-phase volume fraction in cold-rolled AISI 301 steel strip, 555
Development of a mixed film lubrication model in cold rolling, 575
Compact tension
Identification and validation of a ductile damage model for A533 steel, 291

Composite
Simulation of welding chamber conditions for composite profile extrusion, 587
Composite wire
Experimental analysis of drawn composite wire, 701
Compression
An upper bound solution for a solid viscous cylinder subject to compression and twist, 159
Forming behavior of magnesium sheet, 483
Compression test
An investigation on determination of flow curves at room temperature and under forming conditions, 478
Computer aided optimisation
Numerical research and optimisation of high pressure sheet metal forming of tailor rolled blanks, 360
Computer modeling
A physical based modeling approach for the dynamic behavior of ultrafine grained structures, 456
Computer simulation
New framework for on-line feedback control of a deep-drawing operation, 426
Conductivity
Characterisation of extruded magnesium profiles for electromagnetic joining, 266
Confidence limit
Parameter optimisation in constitutive equations for hot forging, 311
Constitutive equation
High temperature deformation of Inconel 718, 469
Constitutive model
Parameter optimisation in constitutive equations for hot forging, 311
Constitutive parameters
Variations of effective length of the hot torsion test specimen with deformation, 465
Contact condition
Evaluation of contact conditions in hot forging of pure aluminum using ultrasonic examination, 243
Contact friction
Contact friction modeling with the extended finite element method (X-FEM), 58
Contact ratio
Evaluation of contact conditions in hot forging of pure aluminum using ultrasonic examination, 243
Continuous expansion extrusion
A method to produce aluminum alloy tube busbars by continuous casting-expansion extrusion, 163
Continuous extrusion
Analysis of flash formation in continuous rotary extrusion of copper, 600
Continuous rotary extrusion
Numerical simulation of flash formation in continuous rotary extrusion of copper, 604
Coordinate measuring machine
A study on the computer-aided measuring integration system for the sheet metal stamping die, 138
Corner forming
Analysis of thinning at the transition corner in tube hydroforming, 688
Correction factor
An investigation on determination of flow curves at room temperature and under forming conditions, 478
Correlations
Sensitivity analysis of quantitative fracture criterion based on the results of the SICO test, 296
Coulomb friction
Energetic analysis of tube drawing processes with fixed plug by upper bound method, 175
Crack
A study on crack healing in 1045 steel, 233
Crack growth
On the modelling of the interaction of materials softening and ductile damage during hot working of Alloy 80A, 282
Analysis of blanking process using various damage criteria, 287
Crack initiation
On the modelling of the interaction of materials softening and ductile damage during hot working of Alloy 80A, 282
Analysis of blanking process using various damage criteria, 287
Identification and validation of a ductile damage model for A533 steel, 291
Crash
TRIP steel: Plastic behaviour modelling and influence on functional behaviour, 433
Critical friction
Development of a critical friction model for cross wedge rolling hollow shafts, 539
Cross-wedge rolling
Establishment of failure conditions for the cross-wedge rolling of hollow shafts, 545
Cross-wedge rolling by means of one flat wedge and two shaped rolls, 550
Crown
An approach to analyse the special rolling of thin strip, 130
Crystal orientation
Effect of "additional shear strain layer" on tensile strength and microstructure of fine drawn wire, 704
Crystal subdivision
Effect of "additional shear strain layer" on tensile strength and microstructure of fine drawn wire, 704
Cylinder
An upper bound solution for a solid viscous cylinder subject to compression and twist, 159

Damage
Virtual metal forming including the ductile damage occurrence. Actual state of the art and main perspectives, 19
Finite element prediction of ductile fracture in sheet metal forming processes, 278
On the modelling of the interaction of materials softening and ductile damage during hot working of Alloy 80A, 282
Damage measurement
Identification and validation of a ductile damage model for A533 steel, 291
Damage mechanics
Numerical and experimental assessment of ductile fracture in tensile and compressive-dominant processes, 300
Data mining
Prediction of coiling temperature on run-out table of hot strip mill using data mining, 121
Deep-drawing
Finite element analysis and formability of non-isothermal deep drawing of AZ31B sheets, 142
New framework for on-line feedback control of a deep-drawing operation, 426
Deformation analysis
Deformation analysis of Au wire bonding, 709
Deformation history
Analysis of deformation behaviour of the large diameter pipe by U-O bending process, 179
Investigation on preformed shape design to improve formability in tube hydroforming process using FEM, 658
Design of experiment
On the quantification of strain distribution in drawn sheet metal products, 439
Diagonal matrix
Parallel processing of 3D rigid-plastic finite element method using diagonal matrix, 63

Die casting
Novel applications of smoothed particle hydrodynamics (SPH) in metal forming, 41
Die design
A knowledge-based engineering design tool for metal forging, 331
Die diagnosis
A study on the computer-aided measuring integration system for the sheet metal stamping die, 138
Die filling
The effects of flash allowance and bar size on forming load and metal flow in closed die forging, 261
Die land length
Upper bound analysis of die land length in cold extrusion, 608
Die semiangle
Influence of geometrical conditions on central burst appearance in axisymmetrical drawing processes, 304
Die structure design automation
A simplified column model for the automatic design of the stamping die structure, 109
Dimensional errors
Quantitative evaluation of dimensional errors of formed components in cold backward cup extrusion, 591
Direct extrusion
Analysis of quality of bimetallic rod after extrusion process, 582
Directional hardening
Modeling and simulation of directional hardening in metals during non-proportional loading, 430
DLC coating
Fabrication of dies in micro-scale for micro-sheet metal forming, 639
Drawing processes
Influence of geometrical conditions on central burst appearance in axisymmetrical drawing processes, 304
Drilling
Embedding of a circular plate into a thin plate by shear joining and its joint strength, 76
Ductile damage
Identification and validation of a ductile damage model for A533 steel, 291
Ductile fracture
On the use of artificial intelligence tools for fracture forecast in cold forming operations, 315
Dynamic recrystallisation
On the modelling of the interaction of materials softening and ductile damage during hot working of Alloy 80A, 282

EBSD
On the modelling of the interaction of materials softening and ductile damage during hot working of Alloy 80A, 282
Effect of "additional shear strain layer" on tensile strength and microstructure of fine drawn wire, 704
Eccentric shaft
The research of forging process of eccentric part on three slide forging press, 214
Eco-efficiency
Eco-efficiency of the cold roll formed product supply chain, 626
Effective length
Variations of effective length of the hot torsion test specimen with deformation, 465
Elastic–plastic dynamic explicit FEM
Research on the influence of material properties on cold ring rolling processes by 3D-FE numerical simulation, 634
Elasto-plastic
Novel applications of smoothed particle hydrodynamics (SPH) in metal forming, 41
Electrical resistivity
A method to produce aluminum alloy tube busbars by continuous casting-expansion extrusion, 163
Electromagnetic forming processes
Multifield modeling of electromagnetic metal forming processes, 270
Electromagnetic joining
Characterisation of extruded magnesium profiles for electromagnetic joining, 266
End forming of tubes
End forming of thin-walled tubes, 183
Energy consumption
Power optimization of common breaking-down sequences in shape rolling, 517
Experimental and numerical study of energy consumption in forward and backward rod extrusion, 612
Enrichment function
The extended finite element method (X-FEM) for powder forming problems, 53
Environmentally friendly
Increasing formability in sheet metal stamping operations using environmentally friendly lubricants, 87
Eulerian
Elasto-plastic finite element simulation of asymmetrical plate rolling using an ALE approach, 525
Experimental tests
Tube-hydroforming experiments on an Al 7003 extruded tube, 672
Experimentation
End forming of thin-walled tubes, 183
Experiments
Three dimensional thermo-mechanical simulation of the tube forming process in Diescher's mill, 167
Cross-wedge rolling by means of one flat wedge and two shaped rolls, 550
Extended FEM
The extended finite element method (X-FEM) for powder forming problems, 53
Contact friction modeling with the extended finite element method (X-FEM), 58
Extrusion
Prediction of structure during shaped extrusion and subsequent static recrystallisation during the solution soaking operation, 26
Novel applications of smoothed particle hydrodynamics (SPH) in metal forming, 41
Solid state bonding in extrusion and FSW: Process mechanics and analogies, 344
Simulation of welding chamber conditions for composite profile extrusion, 587
Extrusion pressure
Upper bound analysis of die land length in cold extrusion, 608

FE analysis
Advanced finite element modelling of plate rolling operations, 513
FE model validation
Tube-hydroforming experiments on an Al 7003 extruded tube, 672
FE simulation
An integrated numerical technique in determining blank shape for net-shape sheet metal forming, 72
A method of constructing smooth tool surfaces for FE prediction of springback in sheet metal forming, 382
TRIP steel: Plastic behaviour modelling and influence on functional behaviour, 433
FEA
Virtual metal forming including the ductile damage occurrence. Actual state of the art and main perspectives, 19
FEA simulation
An approach to process limitations in hydroforming of X-joints as based on formability evaluation, 663
FEM
Prediction of structure during shaped extrusion and subsequent static recrystallisation during the solution soaking operation, 26
Development of an integrated CAD/CAE/CAM system on taper-tipped thread-rolling die-plates, 98

Investigation of a slab method analysis and FEM simulation on rotating compression forming of ring, 150
Free deformation mechanism and change of forming mode in tube inversion under conical die, 171
Prevention of lap formation in near net shape isothermal forging technology of part of irregular shape made of aluminium alloy A92618, 218
Theoretical and laboratory modelling of the closure of metallurgical defects during forming of a forging, 238
Forming of aluminum foam sandwich panels: Numerical simulations and experimental tests, 364
Numerical investigation on dynamic effects during sheet metal spinning by explicit finite-element-analysis, 401
Theoretical and experimental analysis of the dieless incremental sheet forming process, 404
Using forming simulations to improve mechanical simulation accuracy, 422
The application of the inverse method for determination of slitting criterion parameter during the multi slit rolling (MSR) process, 493
Elasto-plastic finite element simulation of asymmetrical plate rolling using an ALE approach, 525
Cross-wedge rolling by means of one flat wedge and two shaped rolls, 550
Numerical modelling of the metal flow and stock bending during the rolling of unequal angle bar, 561
Numerical modelling of the metal flow during the rolling process of the round screw-ribbed bar in the finishing pass, 566
Numerical simulation of flash formation in continuous rotary extrusion of copper, 604
Finite element simulation and experiment in tube hydroforming of unequal T shapes, 684
FEM analysis
Three dimensional thermo-mechanical simulation of the tube forming process in Diescher's mill, 167
FEM simulation
Forming process of valve drop forging with three cavities, 228
The research of forging process of eccentric part on three slide forging press, 214
Experimental and numerical investigation of restoration behavior of sheet metals subjected to bulging deformation, 368
Finite elasto-viscoplasticity
Virtual metal forming including the ductile damage occurrence. Actual state of the art and main perspectives, 19
Finite Element Method
Application of the fully automatic 3D *hp* adaptive code to orthotropic heat transfer in structurally graded material properties, 68
Modelling the free forming of superplastic Pb–Sn60 at constant pressure, 95
Modeling of aluminum alloy sheets based on new anisotropic yield functions, 134
End forming of thin-walled tubes, 183
Relations between numerical simulation and experiment in closed die forging of a gear, 256
Multifield modeling of electromagnetic metal forming processes, 270
New framework for on-line feedback control of a deep-drawing operation, 426
Modelling of skinpass rolling by elasto-plastic analysis of plane strain upsetting, 509
Development of a critical friction model for cross wedge rolling hollow shafts, 539
Simulation of welding chamber conditions for composite profile extrusion, 587
Study on piercing mechanism of small holes, 649
Formability of tube hydroforming under various loading paths, 676
Finite element rolling simulation
Application of hydrostatic integration parameter for free-forging and rolling, 521
Finite element simulation
Modelling of oxide scale surface roughness in hot metal forming, 126
Numerical research and optimisation of high pressure sheet metal forming of tailor rolled blanks, 360
Joinability of aluminium alloy and mild steel sheets by self piercing rivet, 417
Cold rolling of galvanized strips: A new approach to the evaluation of zinc fines formation, 505
Localized edge buckling in cold roll-forming of circular tube section, 617
Analysis of thinning at the transition corner in tube hydroforming, 688
Finite elements
Optimisation of the superplastic forming of aluminium alloys, 91
Finite element analysis and formability of non-isothermal deep drawing of AZ31B sheets, 142
Accelerated 3D FEM computation of the mechanical history of the metal deformation in cold pilgering of tubes, 188
Finite element prediction of ductile fracture in sheet metal forming processes, 278
Numerical and experimental assessment of ductile fracture in tensile and compressive-dominant processes, 300
Inverse identification using the bulge test and artificial neural networks, 307
Power optimization of common breaking-down sequences in shape rolling, 517
Establishment of failure conditions for the cross-wedge rolling of hollow shafts, 545
Application of the Arbitrary Lagrangian Eulerian formulation to the numerical simulation of cold roll forming process, 621
Finite-element-analysis
A study of size effect in micro-forming with micro-hardness tests, 146
Study on the bulging deformation of the porous metal in upsetting, 154
Improvement of tool life in cold forging by locally optimized surfaces, 206
Quantitative evaluation of dimensional errors of formed components in cold backward cup extrusion, 591
Fixed inner plug
Energetic analysis of tube drawing processes with fixed plug by upper bound method, 175
Flash
Analysis of flash formation in continuous rotary extrusion of copper, 600
Numerical simulation of flash formation in continuous rotary extrusion of copper, 604
Flash allowance
The effects of flash allowance and bar size on forming load and metal flow in closed die forging, 261
Flexibility
The design of a flexible model ring rolling machine, 630
Flow behavior
Investigation of the thermo-mechanical properties of hot stamping steels, 452
Flow curves
Quantitative analysis of the microstructure of near β titanium alloy during compression tests, 473
Flow modelling
Modelling of the rheological behaviour of aluminium alloys in multistep hot deformation using the multiple regression analysis and artificial neural network techniques, 323
Flow stress
A study of size effect in micro-forming with micro-hardness tests, 146
Influence of sequence and simultaneous deformation on behavior of CuSi3.5 silicon bronze, 448
A physical based modeling approach for the dynamic behavior of ultrafine grained structures, 456

Fluid flows
Modelling and process control for the hydroforming of metallic liners used for hydrogen storage, 697
Foams
Forming of aluminum foam sandwich panels: Numerical simulations and experimental tests, 364
Force monitoring
A force measuring based strategy for failure prevention in incremental forming, 413
Forging
Novel applications of smoothed particle hydrodynamics (SPH) in metal forming, 41
Quantitative analysis of the impact of forging operations on fatigue properties of steel components, 202
A knowledge-based engineering design tool for metal forging, 331
Forging load
The effects of flash allowance and bar size on forming load and metal flow in closed die forging, 261
Formability
Increasing formability in sheet metal stamping operations using environmentally friendly lubricants, 87
Finite element analysis and formability of non-isothermal deep drawing of AZ31B sheets, 142
Characterisation of extruded magnesium profiles for electromagnetic joining, 266
Effect of annealing temperature on the formability of Al–Mg4.5–Cu0.5 alloy sheets, 386
Investigation on preformed shape design to improve formability in tube hydroforming process using FEM, 658
Forming
Forming of axisymmetric tubes under the influence of impulse-magnetic field and computer simulation of the process, 274
TRIP steel: Plastic behaviour modelling and influence on functional behaviour, 433
Forming limit
Twin-roll strip casting of AZ61 magnesium alloy and improvement of formability by structure-control rolling, 534
An approach to process limitations in hydroforming of X-joints as based on formability evaluation, 663
Forming machine
Micro-forming and miniature manufacturing systems — development needs and perspectives, 8
Forming mode
Free deformation mechanism and change of forming mode in tube inversion under conical die, 171
Forming process design
On the use of artificial intelligence tools for fracture forecast in cold forming operations, 315
Forming processes
Parallel processing of 3D rigid-plastic finite element method using diagonal matrix, 63
Towards an optimisation of forging processes using geometric parameters, 224
Forming tool
Investigation on the sliding of aluminium thin foils against PVD-coated carbide forming-tools during micro-forming, 644
Forward extrusion
Experimental and numerical study of energy consumption in forward and backward rod extrusion, 612
Fracture
An approach to process limitations in hydroforming of X-joints as based on formability evaluation, 663
Fracture criteria
Sensitivity analysis of quantitative fracture criterion based on the results of the SICO test, 296
Free cutting steels
Prediction and avoidance of high temperature damage in long product hot rolling, 486
Free deformation
Free deformation mechanism and change of forming mode in tube inversion under conical die, 171
Free forging
Theoretical and laboratory modelling of the closure of metallurgical defects during forming of a forging, 238
Free-machining steel
Experimental investigation of the spatial variation in viscoplastic response of free-machining steels in hot rolling conditions, 497
Friction
A new experimental procedure of evaluating the friction coefficient in elastic and plastic regions, 247
An investigation on determination of flow curves at room temperature and under forming conditions, 478
Friction factor
Prevention of lap formation in near net shape isothermal forging technology of part of irregular shape made of aluminium alloy A92618, 218
Friction stir welding
Utilisation of engineering workshop equipment for friction stir welding, 336
On microstructural phenomena occurring in friction stir welding of aluminium alloys, 340
FSW
Solid state bonding in extrusion and FSW: Process mechanics and analogies, 344

Geometric parameters
Towards an optimisation of forging processes using geometric parameters, 224
Grain refinement
A physical based modeling approach for the dynamic behavior of ultrafine grained structures, 456
Grain size
Prediction of microstructural evolution in hot rolling, 530
Gurson damage model
Analysis of blanking process using various damage criteria, 287

Hall–Petch relationship
The possibilities of mechanical property control in fine grained structures, 461
Hard roller burnishing
Improvement of tool life in cold forging by locally optimized surfaces, 206
Hardening
Joining and shaping fit of dissimilar materials by shot peening, 356
Healing
A study on crack healing in 1045 steel, 233
Heat treatment
Thermo-mechanical treatment using resistance heating for production of fine grained heat-treatable aluminum alloy sheets, 444
High cycle multiaxial fatigue
Quantitative analysis of the impact of forging operations on fatigue properties of steel components, 202
High strain rate
A physical based modeling approach for the dynamic behavior of ultrafine grained structures, 456
High strength steels
Investigation of 22MnB5 formability in hot stamping operations, 396
Investigation of the thermo-mechanical properties of hot stamping steels, 452
High temperature damage
Prediction and avoidance of high temperature damage in long product hot rolling, 486
Hollow shafts
Development of a critical friction model for cross wedge rolling hollow shafts, 539

Hot deformation
Quantitative analysis of the microstructure of near β titanium alloy during compression tests, 473
Hot forging
Evaluation of contact conditions in hot forging of pure aluminum using ultrasonic examination, 243
Effects of simulation conditions on evaluation of tool temperature in hot extrusion-forging, 251
Hot forming
High temperature deformation of Inconel 718, 469
Hot rolling
Oxide scale behaviour on aluminium and steel under hot working conditions, 36
Experimental investigation of the spatial variation in viscoplastic response of free-machining steels in hot rolling conditions, 497
Prediction of microstructural evolution in hot rolling, 530
Numerical modelling of the metal flow during the rolling process of the round screw-ribbed bar in the finishing pass, 566
Hot stamping
Investigation of 22MnB5 formability in hot stamping operations, 396
Investigation of the thermo-mechanical properties of hot stamping steels, 452
Hot strip mill
Prediction of coiling temperature on run-out table of hot strip mill using data mining, 121
Hot torsion test
Variations of effective length of the hot torsion test specimen with deformation, 465
hp adaptivity
Application of the fully automatic 3D *hp* adaptive code to orthotropic heat transfer in structurally graded material properties, 68
Hydroforming
Numerical research and optimisation of high pressure sheet metal forming of tailor rolled blanks, 360
An approach to process limitations in hydroforming of X-joints as based on formability evaluation, 663
Effect of wrinkling behavior on formability and thickness distribution in tube hydroforming, 668
An experimental investigation into the formability of hydroforming 5A02 Al-tubes at elevated temperature, 680
Modelling and process control for the hydroforming of metallic liners used for hydrogen storage, 697
Hydrostatic integration
Application of hydrostatic integration parameter for free-forging and rolling, 521
Hydrostatic stress
Influence of geometrical conditions on central burst appearance in axisymmetrical drawing processes, 304

Identification
Inverse identification using the bulge test and artificial neural networks, 307
Image processing
Close loop control of a hydraulic press for springback analysis, 377
Inclusions experimental mechanical testing
Prediction and avoidance of high temperature damage in long product hot rolling, 486
Inconel 718
High temperature deformation of Inconel 718, 469
Incremental forming
Theoretical and experimental analysis of the dieless incremental sheet forming process, 404
A force measuring based strategy for failure prevention in incremental forming, 413
Incremental sheet metal spinning
Numerical investigation on dynamic effects during sheet metal spinning by explicit finite-element-analysis, 401
Initial conditions
Using forming simulations to improve mechanical simulation accuracy, 422
Integral shapes
Using an artificial neural network to assist roll design in cold roll-forming processes, 319
Intelligent agent system
Distributed multi-agent system approach for sheet metal forming, 327
Internal defects
Establishment of failure conditions for the cross-wedge rolling of hollow shafts, 545
Internal high pressure forming
Effect of wrinkling behavior on formability and thickness distribution in tube hydroforming, 668
Inverse method
The application of the inverse method for determination of slitting criterion parameter during the multi slit rolling (MSR) process, 493
Inverse modelling
Optimized decision of the exact material modes in the simulation for the innovative sheet hydroforming method, 692
Ion beam irradiation
Fabrication of dies in micro-scale for micro-sheet metal forming, 639
Isothermal forming
Prevention of lap formation in near net shape isothermal forging technology of part of irregular shape made of aluminium alloy A92618, 218

Joining
Joining and shaping fit of dissimilar materials by shot peening, 356
Joinability of aluminium alloy and mild steel sheets by self piercing rivet, 417
Joint strength
Embedding of a circular plate into a thin plate by shear joining and its joint strength, 76

Knowledge based system
A knowledge-based engineering design tool for metal forging, 331

Lagrangian
Elasto-plastic finite element simulation of asymmetrical plate rolling using an ALE approach, 525
Large deformation
Application of the Arbitrary Lagrangian Eulerian formulation to the numerical simulation of cold roll forming process, 621
Modeling and simulation of directional hardening in metals during non-proportional loading, 430
Large diameter
A new method to accurately obtain wrinkling limit diagram in NC bending process of thin-walled tube with large diameter under different loading paths, 192
Large-scale 3D simulation
Parallel processing of 3D rigid-plastic finite element method using diagonal matrix, 63
Laser beam
Manufacture of magnetic scaling rod with transformation-induced plasticity, 570
Laser beam treating
Improvement of tool life in cold forging by locally optimized surfaces, 206
Latham and Cockcroft
Sensitivity analysis of quantitative fracture criterion based on the results of the SICO test, 296
Lead
An investigation on determination of flow curves at room temperature and under forming conditions, 478
Lightweight component
Analysis of thinning at the transition corner in tube hydroforming, 688

Lightweight construction
Metal forming techniques for lightweight construction, 2
Limit strain
Influence of sequence and simultaneous deformation on behavior of CuSi3.5 silicon bronze, 448
Load path
Investigation on determination of loading path to enhance formability in tube hydroforming process using APDL, 653
Loading path
A new method to accurately obtain wrinkling limit diagram in NC bending process of thin-walled tube with large diameter under different loading paths, 192
Formability of tube hydroforming under various loading paths, 676
Local edge buckling
Localized edge buckling in cold roll-forming of circular tube section, 617
Local wrinkling
Formability of tube hydroforming under various loading paths, 676
Longitudinal curvature
Using an artificial neural network to assist roll design in cold roll-forming processes, 319
Longitudinal non-homogeneous deformation
Variations of effective length of the hot torsion test specimen with deformation, 465
Lubricant
Increasing formability in sheet metal stamping operations using environmentally friendly lubricants, 87
Lubrication
Evaluation of contact conditions in hot forging of pure aluminum using ultrasonic examination, 243
Experimental investigation of roughening of the matt surface in pack rolling, 501

Machine design
The design of a flexible model ring rolling machine, 630
Magnesium
Forming behavior of magnesium sheet, 483
Magnesium alloy
Air bending of AZ31 magnesium alloy in warm and hot forming conditions, 373
Magnesium alloy AZ31
Finite element analysis and formability of non-isothermal deep drawing of AZ31B sheets, 142
Magnesium profiles
Characterisation of extruded magnesium profiles for electromagnetic joining, 266
Magnetic
Forming of axisymmetric tubes under the influence of impulse-magnetic field and computer simulation of the process, 274
Magnetic scale
Manufacture of magnetic scaling rod with transformation-induced plasticity, 570
Magneto-thermomechanical coupling
Multifield modeling of electromagnetic metal forming processes, 270
Mapping
Using forming simulations to improve mechanical simulation accuracy, 422
Martensite
Manufacture of magnetic scaling rod with transformation-induced plasticity, 570
Material failure
Numerical and experimental assessment of ductile fracture in tensile and compressive-dominant processes, 300
Material history
Accelerated 3D FEM computation of the mechanical history of the metal deformation in cold pilgering of tubes, 188
Material model
TRIP steel: Plastic behaviour modelling and influence on functional behaviour, 433
Material properties
Springback analysis of numerical control bending of thin-walled tube using numerical-analytic method, 197
Research on the influence of material properties on cold ring rolling processes by 3D-FE numerical simulation, 634
Material utilization
Minimizing wastage of sheet metal for economical manufacturing, 81
Mechanical analysis
Analysis of thinning at the transition corner in tube hydroforming, 688
Mechanical properties
A method to produce aluminum alloy tube busbars by continuous casting-expansion extrusion, 163
Texture evolution and variations of α-phase volume fraction in cold-rolled AISI 301 steel strip, 555
Mesh smoothing
Application of the Arbitrary Lagrangian Eulerian formulation to the numerical simulation of cold roll forming process, 621
Metal forming
Metal forming techniques for lightweight construction, 2
Virtual metal forming including the ductile damage occurrence. Actual state of the art and main perspectives, 19
Numerical solution of bulk metal forming processes by the reproducing kernel particle method, 49
Distributed multi-agent system approach for sheet metal forming, 327
Development of a mixed film lubrication model in cold rolling, 575
Modeling and simulation of directional hardening in metals during non-proportional loading, 430
Metal injection moulding
Experiments and numerical modelling of solid state sintering for 316L stainless steel components, 352
Metallurgical defects
Theoretical and laboratory modelling of the closure of metallurgical defects during forming of a forging, 238
Microalloying
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Micro-die
Fabrication of dies in micro-scale for micro-sheet metal forming, 639
Micro-factory
Micro-forming and miniature manufacturing systems — development needs and perspectives, 8
Micro-forming
Micro-forming and miniature manufacturing systems — development needs and perspectives, 8
A study of size effect in micro-forming with micro-hardness tests, 146
Investigation on the sliding of aluminium thin foils against PVD-coated carbide forming-tools during micro-forming, 644
Micro-hardness test
A study of size effect in micro-forming with micro-hardness tests, 146
Microstructure
A method to produce aluminum alloy tube busbars by continuous casting-expansion extrusion, 163
On microstructural phenomena occurring in friction stir welding of aluminium alloys, 340
Influence of sequence and simultaneous deformation on behavior of CuSi3.5 silicon bronze, 448
Microstructure prediction
Prediction of microstructural evolution in hot rolling, 530
Milling machine
Utilisation of engineering workshop equipment for friction stir welding, 336
Miniature manufacturing system
Micro-forming and miniature manufacturing systems — development needs and perspectives, 8
Mixed lubrication
Development of a mixed film lubrication model in cold rolling, 575

MnS
Prediction and avoidance of high temperature damage in long product hot rolling, 486
Model test
The effects of flash allowance and bar size on forming load and metal flow in closed die forging, 261
Modelling
Oxide scale behaviour on aluminium and steel under hot working conditions, 36
Experiments and numerical modelling of solid state sintering for 316L stainless steel components, 352
Numerical modelling of the metal flow during the rolling process of the round screw-ribbed bar in the finishing pass, 566
Modified influence function method
An approach to analyse the special rolling of thin strip, 130
Morphology
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Multi-agent system
Distributed multi-agent system approach for sheet metal forming, 327
Multiple regression analysis
Modelling of the rheological behaviour of aluminium alloys in multistep hot deformation using the multiple regression analysis and artificial neural network techniques, 323
Multiscale modelling
Prediction and avoidance of high temperature damage in long product hot rolling, 486
Multistep deformation test
Modelling of the rheological behaviour of aluminium alloys in multistep hot deformation using the multiple regression analysis and artificial neural network techniques, 323
Multi-step inverse method
Minimization of the thickness variation in multi-step sheet metal stamping, 84

Nanocrystalline materials
The possibilities of mechanical property control in fine grained structures, 461
NC bending
A new method to accurately obtain wrinkling limit diagram in NC bending process of thin-walled tube with large diameter under different loading paths, 192
Springback analysis of numerical control bending of thin-walled tube using numerical-analytic method, 197
Near beta titanium alloys
Quantitative analysis of the microstructure of near β titanium alloy during compression tests, 473
Near net shape forging
Prevention of lap formation in near net shape isothermal forging technology of part of irregular shape made of aluminium alloy A92618, 218
Near surface deformation
Oxide scale behaviour on aluminium and steel under hot working conditions, 36
Netshape sheet metal forming
An integrated numerical technique in determining blank shape for netshape sheet metal forming, 72
Neural network
Prediction of coiling temperature on run-out table of hot strip mill using data mining, 121
Parameter optimisation in constitutive equations for hot forging, 311
Neutral point
Analysis of asymmetrical cold and hot bond rolling of unbounded clad sheet under constant shear friction, 114
Niobium
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Non-linear least square
New framework for on-line feedback control of a deep-drawing operation, 426
Non-linear optimisation
Parameter optimisation in constitutive equations for hot forging, 311
Numerical analysis
Analysis of deformation behaviour of the large diameter pipe by U-O bending process, 179
Numerical integration
Virtual metal forming including the ductile damage occurrence. Actual state of the art and main perspectives, 19
Numerical modelling
Numerical modelling of the metal flow and stock bending during the rolling of unequal angle bar, 561
Numerical simulation
Towards an optimisation of forging processes using geometric parameters, 224
Relations between numerical simulation and experiment in closed die forging of a gear, 256
Experiments and numerical modelling of solid state sintering for 316L stainless steel components, 352
Numerical-analytic method
Springback analysis of numerical control bending of thin-walled tube using numerical-analytic method, 197

Objective functions
Towards an optimisation of forging processes using geometric parameters, 224
Theoretical and laboratory modelling of the closure of metallurgical defects during forming of a forging, 238
Optimal control
New framework for on-line feedback control of a deep-drawing operation, 426
Optimization
New framework for on-line feedback control of a deep-drawing operation, 426
Power optimization of common breaking-down sequences in shape rolling, 517
Modelling and process control for the hydroforming of metallic liners used for hydrogen storage, 697
Optimum die angle
Experimental and numerical study of optimum die profile in backward rod extrusion, 596
Optimum die profile
Experimental and numerical study of optimum die profile in backward rod extrusion, 596
Oxide scale
Oxide scale behaviour on aluminium and steel under hot working conditions, 36
Modelling of oxide scale surface roughness in hot metal forming, 126

Parallel processing
Parallel processing of 3D rigid-plastic finite element method using diagonal matrix, 63
Parametric modeling of data
Variations of effective length of the hot torsion test specimen with deformation, 465
Parametric study
Finite element simulation and experiment in tube hydroforming of unequal T shapes, 684
Partition of unity
The extended finite element method (X-FEM) for powder forming problems, 53
Contact friction modeling with the extended finite element method (X-FEM), 58
Pilgering
Accelerated 3D FEM computation of the mechanical history of the metal deformation in cold pilgering of tubes, 188

Planar anisotropy
Modeling of aluminum alloy sheets based on new anisotropic yield functions, 134
Plane strain
Energetic analysis of tube drawing processes with fixed plug by upper bound method, 175
Plan-view shape
Advanced finite element modelling of plate rolling operations, 513
Plastic deformation
Joining and shaping fit of dissimilar materials by shot peening, 356
Plasticity of friction
Contact friction modeling with the extended finite element method (X-FEM), 58
Plate impact
A study on crack healing in 1045 steel, 233
Plate rolling
Advanced finite element modelling of plate rolling operations, 513
Porous metal
Study on the bulging deformation of the porous metal in upsetting, 154
Porous sectioned sheet
Use of Taguchi method to develop a robust design for the shape rolling of porous sectioned sheet, 104
Powder compaction
The extended finite element method (X-FEM) for powder forming problems, 53
Powder deposition
Homogeneity aspects in selective laser sintering (SLS), 348
Precipitation
Effect of annealing temperature on the formability of Al–Mg4.5–Cu0.5 alloy sheets, 386
Prediction
Prediction of coiling temperature on run-out table of hot strip mill using data mining, 121
Preformed shape design
Investigation on preformed shape design to improve formability in tube hydroforming process using FEM, 658
Press-forming
Fabrication of dies in micro-scale for micro-sheet metal forming, 639
Pressure control
New framework for on-line feedback control of a deep-drawing operation, 426
Modelling and process control for the hydroforming of metallic liners used for hydrogen storage, 697
Probability
Minimizing wastage of sheet metal for economical manufacturing, 81
Process modelling
Theoretical and experimental analysis of the dieless incremental sheet forming process, 404
Process optimisation
Optimisation of the superplastic forming of aluminium alloys, 91
Process parameters
Springback analysis of numerical control bending of thin-walled tube using numerical-analytic method, 197
Theoretical and experimental analysis of the dieless incremental sheet forming process, 404
Proportional method
Variations of effective length of the hot torsion test specimen with deformation, 465
Pulse
Forming of axisymmetric tubes under the influence of impulse-magnetic field and computer simulation of the process, 274
PVD coatings
Investigation on the sliding of aluminium thin foils against PVD-coated carbide forming-tools during micro-forming, 644

Quantitative metallography
Quantitative analysis of the microstructure of near β titanium alloy during compression tests, 473

Radial basis functions
Using an artificial neural network to assist roll design in cold roll-forming processes, 319
Radial gear extrusion
Relations between numerical simulation and experiment in closed die forging of a gear, 256
Rapid solution treatment
Thermo-mechanical treatment using resistance heating for production of fine grained heat-treatable aluminum alloy sheets, 444
Recrystallisation
Prediction of structure during shaped extrusion and subsequent static recrystallisation during the solution soaking operation, 26
Reduction
Influence of geometrical conditions on central burst appearance in axisymmetrical drawing processes, 304
Upper bound analysis of die land length in cold extrusion, 608
Regression
Prediction of coiling temperature on run-out table of hot strip mill using data mining, 121
Reinforcement bar
Numerical modelling of the metal flow during the rolling process of the round screw-ribbed bar in the finishing pass, 566
Rejections
Minimizing wastage of sheet metal for economical manufacturing, 81
Reproducing kernel particle method
Numerical solution of bulk metal forming processes by the reproducing kernel particle method, 49
Residual stress
Embedding of a circular plate into a thin plate by shear joining and its joint strength, 76
Resistance heating
Application of the fully automatic 3D *hp* adaptive code to orthotropic heat transfer in structurally graded material properties, 68
Thermo-mechanical treatment using resistance heating for production of fine grained heat-treatable aluminum alloy sheets, 444
Response surface method
Minimization of the thickness variation in multi-step sheet metal stamping, 84
Restoration
Experimental and numerical investigation of restoration behavior of sheet metals subjected to bulging deformation, 368
Retained austenite
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Rigid-plastic FEM
Parallel processing of 3D rigid-plastic finite element method using diagonal matrix, 63
Ring rolling
The design of a flexible model ring rolling machine, 630
Rivet
Joinability of aluminium alloy and mild steel sheets by self piercing rivet, 417
Robust design
Use of Taguchi method to develop a robust design for the shape rolling of porous sectioned sheet, 104
Roll edge contact rolling
An approach to analyse the special rolling of thin strip, 130
Rolling
Use of Taguchi method to develop a robust design for the shape rolling of porous sectioned sheet, 104
Rolling force
An approach to analyse the special rolling of thin strip, 130
Room temperature
An investigation on determination of flow curves at room temperature and under forming conditions, 478
Rotary forming
Manufacture of magnetic scaling rod with transformation-induced plasticity, 570

Rotating compression forming
Investigation of a slab method analysis and FEM simulation on rotating compression forming of ring, 150

Scale failure
Oxide scale behaviour on aluminium and steel under hot working conditions, 36
Scattered data points
A method of constructing smooth tool surfaces for FE prediction of springback in sheet metal forming, 382
Screw ribbed
Numerical modelling of the metal flow during the rolling process of the round screw-ribbed bar in the finishing pass, 566
Selective laser sintering (SLS)
Homogeneity aspects in selective laser sintering (SLS), 348
Self piercing rivet
Joinability of aluminium alloy and mild steel sheets by self piercing rivet, 417
SEM
Experimental analysis of drawn composite wire, 701
Sensitivity
Sensitivity analysis of quantitative fracture criterion based on the results of the SICO test, 296
Shape anvils
Theoretical and laboratory modelling of the closure of metallurgical defects during forming of a forging, 238
Shape rolling
Power optimization of common breaking-down sequences in shape rolling, 517
Shaping fit
Joining and shaping fit of dissimilar materials by shot peening, 356
Shear bands
Experimental investigation of roughening of the matt surface in pack rolling, 501
Shear failure
Analysis of blanking process using various damage criteria, 287
Shear joining
Embedding of a circular plate into a thin plate by shear joining and its joint strength, 76
Shearing
Study on piercing mechanism of small holes, 649
Sheet forming
Modeling of aluminum alloy sheets based on new anisotropic yield functions, 134
Finite element prediction of ductile fracture in sheet metal forming processes, 278
Air bending of AZ31 magnesium alloy in warm and hot forming conditions, 373
Sheet hydroforming
Optimized decision of the exact material modes in the simulation for the innovative sheet hydroforming method, 692
Sheet metal
Distributed multi-agent system approach for sheet metal forming, 327
New framework for on-line feedback control of a deep-drawing operation, 426
Theoretical and experimental analysis of the dieless incremental sheet forming process, 404
Sheet metal formability
Investigation of 22MnB5 formability in hot stamping operations, 396
Sheet metal forming
Inverse identification using the bulge test and artificial neural networks, 307
A method of constructing smooth tool surfaces for FE prediction of springback in sheet metal forming, 382
A force measuring based strategy for failure prevention in incremental forming, 413
On the quantification of strain distribution in drawn sheet metal products, 439
Sheet metal stamping
Minimization of the thickness variation in multi-step sheet metal stamping, 84
Sheet stamping
Increasing formability in sheet metal stamping operations using environmentally friendly lubricants, 87
Shot peening
Joining and shaping fit of dissimilar materials by shot peening, 356
Shrink fit
Embedding of a circular plate into a thin plate by shear joining and its joint strength, 76
SICO test
Sensitivity analysis of quantitative fracture criterion based on the results of the SICO test, 296
Silicon bronze
Influence of sequence and simultaneous deformation on behavior of CuSi3.5 silicon bronze, 448
Simplified column model
A simplified column model for the automatic design of the stamping die structure, 109
Simulation
Prediction of structure during shaped extrusion and subsequent static recrystallisation during the solution soaking operation, 26
Prevention of lap formation in near net shape isothermal forging technology of part of irregular shape made of aluminium alloy A92618, 218
Numerical simulation of flash formation in continuous rotary extrusion of copper, 604
Optimized decision of the exact material modes in the simulation for the innovative sheet hydroforming method, 692
Simulation conditions
Effects of simulation conditions on evaluation of tool temperature in hot extrusion-forging, 251
Sintering
Experiments and numerical modelling of solid state sintering for 316L stainless steel components, 352
Size effect
A study of size effect in micro-forming with micro-hardness tests, 146
Skin-pass
Cold rolling of galvanized strips: A new approach to the evaluation of zinc fines formation, 505
Skinpass rolling
Modelling of skinpass rolling by elasto-plastic analysis of plane strain upsetting, 509
Slab method
Investigation of a slab method analysis and FEM simulation on rotating compression forming of ring, 150
Slip
Forming behavior of magnesium sheet, 483
Slitting passes
The application of the inverse method for determination of slitting criterion parameter during the multi slit rolling (MSR) process, 493
Small hole piercing
Study on piercing mechanism of small holes, 649
Smoothed particle hydrodynamics
Novel applications of smoothed particle hydrodynamics (SPH) in metal forming, 41
Solid bonding
Solid state bonding in extrusion and FSW: Process mechanics and analogies, 344
Solution soak
Prediction of structure during shaped extrusion and subsequent static recrystallisation during the solution soaking operation, 26
Specialized experiments
Development of a critical friction model for cross wedge rolling hollow shafts, 539

Springback
Modeling of aluminum alloy sheets based on new anisotropic yield functions, 134
Springback analysis of numerical control bending of thin-walled tube using numerical-analytic method, 197
Using an artificial neural network to assist roll design in cold roll-forming processes, 319
Air bending of AZ31 magnesium alloy in warm and hot forming conditions, 373
A method of constructing smooth tool surfaces for FE prediction of springback in sheet metal forming, 382
Modeling and simulation of directional hardening in metals during non-proportional loading, 430
TRIP steel: Plastic behaviour modelling and influence on functional behaviour, 433
Springback analysis
Close loop control of a hydraulic press for springback analysis, 377
Staggered solution algorithm
Multifield modeling of electromagnetic metal forming processes, 270
Stainless steel
Experiments and numerical modelling of solid state sintering for 316L stainless steel components, 352
Texture evolution and variations of α-phase volume fraction in cold-rolled AISI 301 steel strip, 555
316L stainless steel
Experimental analysis of drawn composite wire, 701
Stamping
Minimizing wastage of sheet metal for economical manufacturing, 81
Stamping die
A study on the computer-aided measuring integration system for the sheet metal stamping die, 138
Steel
A study on crack healing in 1045 steel, 233
A new experimental procedure of evaluating the friction coefficient in elastic and plastic regions, 247
Steel sheet
Joinability of aluminium alloy and mild steel sheets by self piercing rivet, 417
Steel strip rolling
Modelling of skinpass rolling by elasto-plastic analysis of plane strain upsetting, 509
Stock bending
Numerical modelling of the metal flow and stock bending during the rolling of unequal angle bar, 561
Strain distribution
On the quantification of strain distribution in drawn sheet metal products, 439
Strain energy balance
Variations of effective length of the hot torsion test specimen with deformation, 465
Strain hardening
Effect of annealing temperature on the formability of Al–Mg4.5–Cu0.5 alloy sheets, 386
Strain path
Influence of sequence and simultaneous deformation on behavior of CuSi3.5 silicon bronze, 448
Strain rate
Influence of geometrical conditions on central burst appearance in axisymmetrical drawing processes, 304
Strain rate sensitivity
Effect of annealing temperature on the formability of Al–Mg4.5–Cu0.5 alloy sheets, 386
Strain-induced martensite
Texture evolution and variations of α-phase volume fraction in cold-rolled AISI 301 steel strip, 555
Strain-path change
Modeling and simulation of directional hardening in metals during non-proportional loading, 430
Strengthening mechanisms
A physical based modeling approach for the dynamic behavior of ultrafine grained structures, 456
The possibilities of mechanical property control in fine grained structures, 461
Stress distribution
Formability of tube hydroforming under various loading paths, 676
Stretch-flangeability
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Strip slitting
The application of the inverse method for determination of slitting criterion parameter during the multi slit rolling (MSR) process, 493
Substructure
Prediction of structure during shaped extrusion and subsequent static recrystallisation during the solution soaking operation, 26
Superplastic forming
Optimisation of the superplastic forming of aluminium alloys, 91
Modelling the free forming of superplastic Pb–Sn60 at constant pressure, 95
Supply chains
Eco-efficiency of the cold roll formed product supply chain, 626
Surface characterisation
Modelling of oxide scale surface roughness in hot metal forming, 126
Surface damage
Cold rolling of galvanized strips: A new approach to the evaluation of zinc fines formation, 505
Surface development
An integrated numerical technique in determining blank shape for netshape sheet metal forming, 72
Surface quality
Oxide scale behaviour on aluminium and steel under hot working conditions, 36
Surface roughness
Experimental investigation of roughening of the matt surface in pack rolling, 501
Surface roughness deformation
Modelling of oxide scale surface roughness in hot metal forming, 126
Surface texturing
Improvement of tool life in cold forging by locally optimized surfaces, 206
Surface treatment
Improvement of tool life in cold forging by locally optimized surfaces, 206
Joining and shaping fit of dissimilar materials by shot peening, 356

T joint
Finite element simulation and experiment in tube hydroforming of unequal T shapes, 684
Taguchi method
Use of Taguchi method to develop a robust design for the shape rolling of porous sectioned sheet, 104
A simplified column model for the automatic design of the stamping die structure, 109
Tensile strength
Effect of "additional shear strain layer" on tensile strength and microstructure of fine drawn wire, 704
Tension
Forming behavior of magnesium sheet, 483
Testing device
Cold rolling of galvanized strips: A new approach to the evaluation of zinc fines formation, 505
Texture
Twin-roll strip casting of AZ61 magnesium alloy and improvement of formability by structure-control rolling, 534
Texture evolution
Texture evolution and variations of α-phase volume fraction in cold-rolled AISI 301 steel strip, 555

Thermo-mechanical properties
Investigation of the thermo-mechanical properties of hot stamping steels, 452
Thickness ratio of clad sheet
Analysis of asymmetrical cold and hot bond rolling of unbounded clad sheet under constant shear friction, 114
Thin strip
An approach to analyse the special rolling of thin strip, 130
Thin-walled tube
A new method to accurately obtain wrinkling limit diagram in NC bending process of thin-walled tube with large diameter under different loading paths, 192
Springback analysis of numerical control bending of thin-walled tube using numerical-analytic method, 197
Thixoforming
Application of the fully automatic 3D *hp* adaptive code to orthotropic heat transfer in structurally graded material properties, 68
Thread-rolling
Development of an integrated CAD/CAE/CAM system on taper-tipped thread-rolling die-plates, 98
Three-slide forging press
The research of forging process of eccentric part on three slide forging press, 214
Forming process of valve drop forging with three cavities, 228
Ti–10–2–3
Quantitative analysis of the microstructure of near β titanium alloy during compression tests, 473
Tin
An investigation on determination of flow curves at room temperature and under forming conditions, 478
Tin–lead alloy
Modelling the free forming of superplastic Pb–Sn60 at constant pressure, 95
Tool design
A method of constructing smooth tool surfaces for FE prediction of springback in sheet metal forming, 382
Tool deterioration
Effects of simulation conditions on evaluation of tool temperature in hot extrusion-forging, 251
Tool life
Improvement of tool life in cold forging by locally optimized surfaces, 206
Tool path optimization
Optimization of tool path in two points incremental forming, 409
Tool softening
Effects of simulation conditions on evaluation of tool temperature in hot extrusion-forging, 251
Tool temperature
Effects of simulation conditions on evaluation of tool temperature in hot extrusion-forging, 251
Topography
Experimental investigation of roughening of the matt surface in pack rolling, 501
Tribology
Experimental investigation of roughening of the matt surface in pack rolling, 501
Investigation on the sliding of aluminium thin foils against PVD-coated carbide forming-tools during micro-forming, 644
TRIP
Manufacture of magnetic scaling rod with transformation-induced plasticity, 570
TRIP steel
TRIP steel: Plastic behaviour modelling and influence on functional behaviour, 433
TRIP-aided steel
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Tube crushing
Establishment of failure conditions for the cross-wedge rolling of hollow shafts, 545
Tube drawing
Energetic analysis of tube drawing processes with fixed plug by upper bound method, 175
Tube hydroforming
Investigation on determination of loading path to enhance formability in tube hydroforming process using APDL, 653
Tube-hydroforming experiments on an Al 7003 extruded tube, 672
Formability of tube hydroforming under various loading paths, 676
Finite element simulation and experiment in tube hydroforming of unequal T shapes, 684
Analysis of thinning at the transition corner in tube hydroforming, 688
Tube hydroforming process
Investigation on preformed shape design to improve formability in tube hydroforming process using FEM, 658
Tube inversion
Free deformation mechanism and change of forming mode in tube inversion under conical die, 171
Tube piercing process
Three dimensional thermo-mechanical simulation of the tube forming process in Diescher's mill, 167
Tubes
Accelerated 3D FEM computation of the mechanical history of the metal deformation in cold pilgering of tubes, 188
Effect of wrinkling behavior on formability and thickness distribution in tube hydroforming, 668
Tubular
Forming of axisymmetric tubes under the influence of impulse-magnetic field and computer simulation of the process, 274
Twinning
Forming behavior of magnesium sheet, 483
Twin-roll strip casting
Twin-roll strip casting of AZ61 magnesium alloy and improvement of formability by structure-control rolling, 534
Two points incremental forming
Optimization of tool path in two points incremental forming, 409

Ultra high-strength steel
Formability of Nb bearing ultra high-strength TRIP-aided sheet steels, 390
Ultrasonic examination
Evaluation of contact conditions in hot forging of pure aluminum using ultrasonic examination, 243
Unequal angle bar
Numerical modelling of the metal flow and stock bending during the rolling of unequal angle bar, 561
Unified constitutive equations
Prediction of microstructural evolution in hot rolling, 530
Uniform fine microstructure
Twin-roll strip casting of AZ61 magnesium alloy and improvement of formability by structure-control rolling, 534
U-O bending process
Analysis of deformation behaviour of the large diameter pipe by U-O bending process, 179
Upper bound
An upper bound solution for a solid viscous cylinder subject to compression and twist, 159
Upper bound method
Energetic analysis of tube drawing processes with fixed plug by upper bound method, 175
Upsetting
Study on the bulging deformation of the porous metal in upsetting, 154
Modelling of skinpass rolling by elasto-plastic analysis of plane strain upsetting, 509

Validation
Numerical investigation on dynamic effects during sheet metal spinning by explicit finite-element-analysis, 401
Valve drop forging
Forming process of valve drop forging with three cavities, 228
Viscoplasticity
Experimental investigation of the spatial variation in viscoplastic response of free-machining steels in hot rolling conditions, 497

Warm rolling
Twin-roll strip casting of AZ61 magnesium alloy and improvement of formability by structure-control rolling, 534
Warm-forging
Forgeability of Mg–Al–Zn magnesium alloys in hot and warm closed die forging, 210
Waste minimisation
Eco-efficiency of the cold roll formed product supply chain, 626
Wire bonding
Deformation analysis of Au wire bonding, 709
Wrinkle
Effect of wrinkling behavior on formability and thickness distribution in tube hydroforming, 668
Wrinkling
Experimental and numerical investigation of restoration behavior of sheet metals subjected to bulging deformation, 368
Wrinkling limit
A new method to accurately obtain wrinkling limit diagram in NC bending process of thin-walled tube with large diameter under different loading paths, 192
Wrought magnesium alloys
Forgeability of Mg–Al–Zn magnesium alloys in hot and warm closed die forging, 210

X-joint
An approach to process limitations in hydroforming of X-joints as based on formability evaluation, 663

Yield function
Modeling of aluminum alloy sheets based on new anisotropic yield functions, 134

Zinc fines
Cold rolling of galvanized strips: A new approach to the evaluation of zinc fines formation, 505
